Canva, Git, Microsoft Excel, MySQL, VS Code

CORE COMPETENCIES
Database Management
Object-Oriented Programming
Problem Solving
Team Collaboration
Time Management
Web Development

Languages

English
Kannada
Tamil

Profile

Computer Science and Engineering student at MVJ College of Engineering with a CGPA of 8.07, seeking Software Development or Web Development opportunities. Experienced in building practical applications and applying problem-solving skills to real-world challenges. Demonstrates strong teamwork, adaptability, and a commitment to continuous learning. . Eager to apply technical skills, contribute to real-world projects, and learn through internships and entry-level roles.

Education

B.E. in Computer Science and Engineering — **Expected 2028**
MVJ College of Engineering, Bengaluru
5th Semester | CGPA: 8.07

Pre University (PUC) in PCMC — **2022–24**
St. Joseph's Indian Composite PU College, Bengaluru
Karnataka State Board | Percentage: 80.5%

SSLC — **2021–22**
SSB English High School, Bengaluru
Karnataka State Board | Percentage: 92.96%

Projects

Apartment Maintenance Management App

Flask, Python, PostgreSQL, HTML, CSS, JavaScript

- Developed a web-based apartment maintenance management system to manage **apartment finances, flats, and resident owner accounts**.
- Implemented secure login and role-based access control for administrators and flat owners.
- Built maintenance collection and expense tracking features with dashboards displaying opening balance, total collections, total expenses, and current balance.
- Developed owner and flat management functionality, including account creation, flat assignments, editing, and deletion.
- Integrated financial reports, date-based filtering, PDF/Excel exports, and interactive charts for improved financial monitoring and transparency.

SubadrNari — Women's Safety App

Team Project | Python, Flask, HTML, CSS, JavaScript

- Developed a women's safety web application featuring **SOS alerts, emergency contact management, and unsafe-area reporting**.
- Integrated interactive maps using Leaflet.js and OpenStreetMap to visualize user locations, reported incidents, and predefined danger zones.
- Implemented safe-route planning to compare routes using distance, estimated travel time, and safety-related information.
- Designed a location-based safety dashboard to display the user's approximate area and an area-specific safety score.
- Built an incident-reporting interface with categories such as harassment, eve-teasing, stalking, and poor lighting, along with risk-level selection.

AI-Based Recipe Recommendation System

Team Project | Python, Machine Learning | In Progress

- Proposed a system that recommends recipes based on available ingredients and suggests recipes from uploaded food or ingredient images.
- YOLO11 and KNN are the planned model approach; dataset selection and implementation are yet to begin.
